# STFU & EAT

---

---

We have all been there. With a group of friends, starving, but no one can choose where to eat.

STFU & EAT acts as your trigger man, providing a random restaurant recommendation for those hangry moments. All local St. Louis CITY restaurants that are under \$25 for one person, chains excluded.

The best part? Great food and no obligation to go to the place suggested by your friend of a friend of a friend. You get the idea. Hit the "Let's Eat!" button and your culinary journey begins.

Have more time? Feel free to browse through our full list of restaurants.

---

# MVP Features

- about page
  - random restaurant recommendation
  - built-in directions
  - access to restaurant website
  - user registration/login
  - restaurant list for browsing
  - ability to filter list by name, neighborhood, or cuisine
-

---

---

# Future Priorities

- oauth option
  - restaurant ratings
  - “smart” recommendation based on ratings
  - branding
  - deployment
-

---

# What I Learned

Mariah

- NoSQL database
  - API endpoints
  - creating backend that frontend can use
  - built-in directions
-

---

# What I Learned

Danielle

- React JS Framework
- Connecting to backend API endpoints
- React Bootstrap
- React Testing Library, Enzyme, Jest
